

COMP232 Lab 7

Seed Labs

For the purpose of this Lab session we will use *Seed Labs*. Please familiarise yourself with this project by following the link in the Reference section below. We will be working on the *MD5 Collision Attack* lab from within the Cryptography section of Seed Labs.

References:

- [SEED Project](#)
- [SEED Labs MD5 collision](#)

We have pre-installed a Virtual Machine running Ubuntu 20.04 operating system with all required for Seed Labs software in the University Labs as an application. Please locate this (on the desktop), and run the application.

Task 1

- Basic knowledge of *Linux* operating system is required to perform the tasks with Seed Labs. In particular, learn the following terminal commands/tools: `ls` , `cd` , `cat` , `less` , `diff` , `clear` .
- Read the page [SEED Labs MD5 Collision](#)
- Read the *Introduction* of the [MD5 Collision Lab Sheet](#) (also available on Canvas)

Task 2

- Perform **Task 1** (from Section 2) titled "*Generating Two Different Files with the Same MD5 Hash*" described in the same MD5 Collision Lab Sheet: [MD5 Collision Lab Sheet](#)
